Dr. Rela Institute & Medical Centre is a multi-specialty quaternary care hospital located in Chennai, India.

The Institute is within the campus of Sree Balaji Medical College and Hospital, which is spread across 36 acres. It has 14 operating theatres with 450 beds, inclusive of 150 critical care beds.

The Institute is conveniently located 10 minutes from the Domestic and International Airport.

The hospital is designed to provide highly specialized care in various departments with a focus on multi-organ transplantation. Prof. Mohammed Rela, a world renowned surgeon in the field of Liver surgery and transplantation is the Chairman and Managing Director of the Institute.

In addition to quaternary & quality care, is also committed to provide day to day primary and secondary care to the local population, with facilities of international standards.

The Institute would provide comprehensive support to international patients travelling for medical treatment such as language assistance, stay, visa and travel.

DO'S & DON'TS During Pregnancy

Department of
Obstetrics & Gynaecology

General 'Do's And Don'ts During Pregnancy

THINGS TO DO DURING PREGNANCY

- Get routine prenatal care; come to your scheduled appointments!
- Seven hours sleep an extra hour every night. Try to alternate activities with breaks
- Get regular exercise! Stop and rest if you get winded, nauseated, or start contracting or bleeding. Avoid contact sports or sports in which you may fall on your belly
- Take care of your teeth. Brush, floss, and see your dentist regularly for check-ups. (1st Trimester)
- Sex: Continue making love if it is comfortable. It is okay to be creative about positions. Your provider may discourage sex only if certain complications arise, such as preterm labor or placenta previa
- Get educated about pregnancy, labor and delivery, breastfeeding, infant and child care, and parenting
- Eat a healthy diet. Learn about good nutrition for you and for your new family
- Drink plenty of water
- Get dental x-rays, if indicated the risk to the fetus is exceptionally low whereas the risk to you of not getting proper medical/dental care can be great
- Take folic acid, iron, calcium, vitamins supplementation
- Get vaccinated during edidemic outhreat
- Gain weight smartly

THINGS TO AVOID DURING PREGNANCY

- Avoid medicationsincluding herbal supplements and over-the-counter medications unless prescribed by your doctor.
- Avoid excessive exercise, heavy lifting, or unusual activities without discussing this with your provider
- Avoid toxic fumes and chemicals. What affects your body can also affect your developing baby. Ask your physician about concerns you have with environmental exposures.
- Avoid alcohol in any form. Alcohol crosses the placenta and can cause birth defects and low birth weight.
- Avoid tobacco in any form. Smoking (even second hand smoke) can contribute to miscarriage, low birth weight, premature delivery, and respiratory problems for your child later in life. Families who smoke in the house increase the risk of SIDS in your baby. Please have everyone who smokes refrain from smoking anywhere you or your children may be.
- Avoid all illegal drugs and marijuana. They may cause birth defects, learning and behavior problems, or fetal death.
- Avoid raw meat and fish, uncooked or undercooked eggs or soft, runny cheeses. They may carry microorganisms that can be harmful to your pregnancy.
- Aoide deli meat like hotdog, sausage, cured meat
- Avoid cat feces. It may contain a serious infection which can affect your baby.
- If you do enjoy seafood, ask your provider for more information about how to avoid high mercury level fish.
- Limit caffeinated beverages and sugary drinks as much as possible. An occasional caffeinated drink (one cup of coffee a day) is safe.
- Do not eat unpasteurised milk products
