Are Vaccines Safe?

As with any medicine, there are some possible side effects which includes,

- Minor discomfort
- Soreness/mild rash on the skin where the shot was given
- Fever

THESE MILD EFFECTS ARE NORMAL AND SHOULD NOT CAUSE ALARM

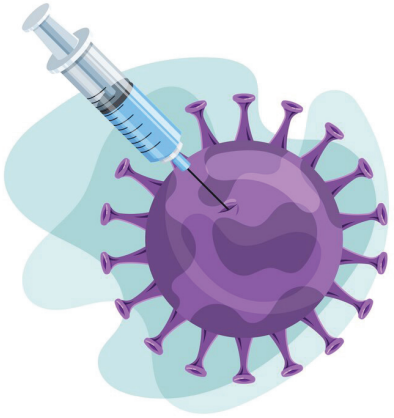

Do's

- Get vaccinated
- Follow your doctor's orders
- Stay hydrated
- Get regular exercise
- Take care of your mental health.

Dont's

- Skip dialysis treatments
- Drink too much fluid
- Eat a high-protein diet
- Take over-the-counter medications without talking to your doctor
- Smoking

THE POSSIBLE HARM FROM VACCINES IS VERY SMALL.

THE POSSIBLE HARM FROM INFECTION IS MUCH GREATER.

Vaccines

PREPARING FOR THE UNEXPECTED, SUPPORTING THE VULNERABLE!

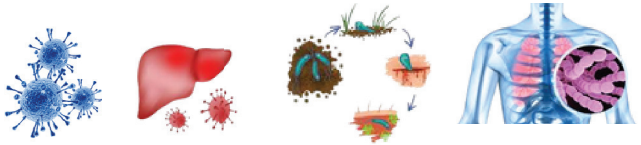

This educational brochure will help answer some questions you may have about vaccines for people on dialysis

Vaccines protect you from serious diseases, so they are an important part of your healthcare

WHY DO I NEED VACCINES?

Vaccines help protect people from diseases caused by infections from certain germs (viruses or bacteria).

FLU VIRUS HEPATITIS B TETANUS PNEUMOCOCCUS

DOES IT SPREAD?

High-risk patients for infections are

CHILDREN ELDERLY CHRONICILLNESS PATIENTS

DIALYSIS PATIENTS

DO VACCINES PROTECT?

DO I NEED VACCINES IF I AM ON DIALYSIS?

WHY? People on dialysis can have weaker immune system making it harder to fight off infections.

WHICH VACCINES DO I NEED?

FLU VACCINE - Commonly called a "flu shot". It prevents infection from the influenza virus.

HEPATITIS B VACCINE - It protects against infection from the hepatitis B virus (also known as HBV or Hep B). A blood test can prove if you have hepatitis B

PNEUMOCOCCAL VACCINE - It helps protect against infection from pneumococcal bacteria. Two types of Pneumococcal vaccines are PPSV23 and PCV13.

Tdap VACCINE - It protects against infections from three different types of germs: Tetanus, Diphtheria and Pertussis.

OTHER VACCINES ARE LISTED IN THE TABLE BELOW

Check with your healthcare provider about the vaccines you already received or the ones you might still need

VACCINES RECOMMENDED FOR PATIENTS ON DIALYSIS	
VACCINES	**DOSAGE**
Flu (Influenza)	1 dose/year
Hepatitis B Virus (HBV)	3 doses (ask your healthcare provider about timing and dosage)
Hepatitis A Virus (HAV)	2 doses
Pneumococcal pneumonia (2 types of vaccines)	1 or 2 doses (ask your healthcare provider about timing and spacing)
Tetanus, Diphtheria, Pertussis (Td/Tdap)	1 time dose of Tdap, then Td booster every 10 years
Measles, mumps and rubella (MMR)	1 or 2 doses
Human papilloma virus (HPV)	Female: 3 doses up to age 26 Male: 3 doses up to age 21
Haemophilus influenzae type b (Hib)	1 or 3 doses
Varicella (Chickenpox)	1 dose
Meningococcal (meningitis)	Use if needed, 1 or more doses (dependent on patient)
